### **DETAILED ACTION**

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on September 13, 2011 has been entered.
2. Claims **1-3, 5, 6, and 8-23** are pending in this application.

### ***Information Disclosure Statement***

3. The information disclosure statement (IDS) submitted on September 13, 2011 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

### ***Allowable Subject Matter/Reasons for Allowance***

4. Claims **1, 5, 8, 11, 14, 16, 17, 18, and 19** are allowed over the prior arts cited records.

The closest prior arts are:

- 1) Del Sesto (US 6,985,882) discloses buying and selling media advertising units over a distributed communication network, such as the Internet, provides a server on

Art Unit: 3684

network including a database containing information pertaining to available advertising units, such as advertising time slots in television programming schedules, provided by media content providers. The server provides buyers of the advertising units access to the database over the network, whereby buyers may search the database and make bids to the sellers for selected advertising units. Sellers of advertising units access the database over said network to enter the information, receive bids entered by buyers, accept bids, and enter contracts into the server for communication to buyers over the network.

2) Coyle (US 6,269,157) discloses telecommunication switches route calls in accordance with economic incentives (e.g., least cost routing) resulting from a bidding process between participating telecommunication carriers (Carriers), administered by a bidding service provider through operation of a central processor, at computer referred to as a bidding moderator (Moderator). The technology required to facilitate forward delivery transactions, in which a buyer and seller agree to the terms of a transaction today but schedule actual delivery for a future time, would be helpful to end users, resellers and Carriers. The Moderator can facilitate such transactions by processing requests for end users or resellers (as buyers) for telecommunications services to be delivered by Carriers in the future. In order to provide the Moderator with sufficient information to process such a request, the buyer enters the information describing the request on a software-derived template and transmits such information to the Moderator.

Thus, Del Sesto is directed to a negotiation between a product developer/seller and an advertiser related to the price the product seller must pay to the advertiser for a given amount of advertising units. Coyle discloses a moderator that runs an auction by which carriers can bid on prices of communication services offered to subscribers. Coyle is directed to providing a general communication service to subscribers (e.g., cost per minute of service, etc.), but is not related to negotiating a price for the download of a particular application that is executable on the device. Thus, in Coyle, the actual programs or applications downloaded to subscribers that receive service in accordance with a winning bid are negotiated separately from the price paid for the service itself (i.e., even if a phone has call-service, the user must still separately negotiate and/or pay for an application for the phone in order to download the application). Regarding Del Sesto, even if the advertisements are run as some type of application, one skilled in the art would recognize that clients using the applications do not purchase advertisements. Thus, the combination of Del Sesto and Coyle do not disclose "*offering at least one of the one or more client-executable applications to clients of the first of the multiple provider entities, wherein the clients of the first of the multiple provider entities are capable of purchasing the at least one of the one or more client-executable applications according to the first modification of the first data.*"

Therefore, it is clear from the description of Del Sesto's and Coyle's inventions that the cited prior arts do not consider the possibility of: *offering at least one of the one or more client-executable applications to clients of the first of the multiple provider entities, wherein the clients of the first of the multiple provider entities are capable of*

Art Unit: 3684

purchasing the at least one of the one or more client-executable applications according to the first modification of the first data, **as included in claims 1, 5, 8, 11, and 14;**  
offering the one of the multiple applications to clients of the carrier, wherein the clients of the carrier are capable of purchasing the one of the multiple applications according to the associated metadata, **as included in claims 16 and 17;** offering one of the client-executable applications associated with one of the multiple provider entities to clients of one of the multiple delivery entities, wherein the clients of one of the multiple delivery entities are capable of purchasing the one of the client-executable applications according to the associated modified metadata, **as included in claims 18 and 19.**

5. Claims (2, 3, 20-23), (6), (9, 10), (12, 13) and (15), are allowed because they are dependent claims of the allowable independent claims 1, 5, 8, 11, and 14 above, in that order.

### **Conclusion**

6. Claims **1-3, 5, 6, and 8-23** are allowed.
